

## Welcome to DFC Ltd

Fuel Polishing Service

Planned Maintenance Programmes

Service and Installation

We specialise in the cleaning ('polishing') of fuel stored in tanks and we visit your premises to carry out the work in situ. We use a special conditioning machine which processes and conditions the fuel and returns it to the tank, with no loss of volume and no need for expensive replacement. Alternatively, you can install your own Fuel Polishing machine - please ask us to quote.

You can then be assured that the fuel for your generator will be clean and in optimum condition, ready for use. Your generator will be more reliable, there will be less blocked filters!

- If you have a stand-by generator or burner
- If you have a tank of diesel fuel or gas oil
- If you depend on your power supply &ndash; the lifblood of your business
- If your fuel hasn't been checked recently
- If your generator has ever stopped suddenly

DFC can help you!

Clean fuel at the top, water layer in the centre, and sludgy fuel at the bottom.

Fuel polishing machine, installed.
